Outline

- **Test Facility**

- **System's Architecture**

- Components
- Signals
- Forecasts
- Controller

- **Conclusions**

Advanced Controller Structure Classification

Direct Control (DC) which controls the power consumption within predefined constraints by directly interrupting or altering the power consumption of the DERs.

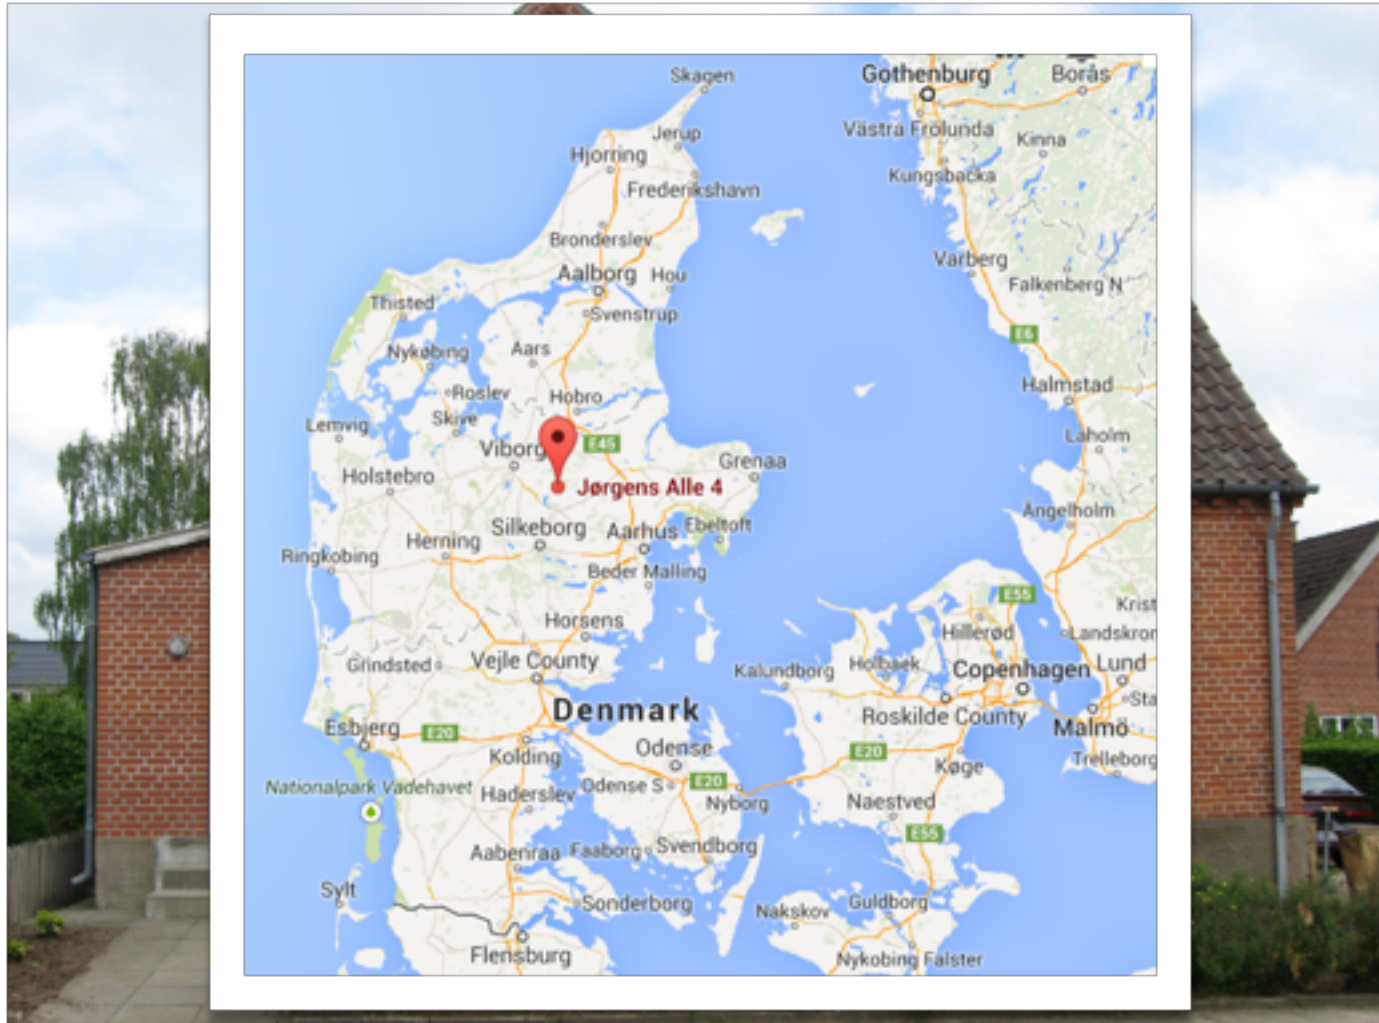

Indirect Control (IC) that consists in setting up a policy, which encourages flexibility of the DERs by changing the cost of electricity.

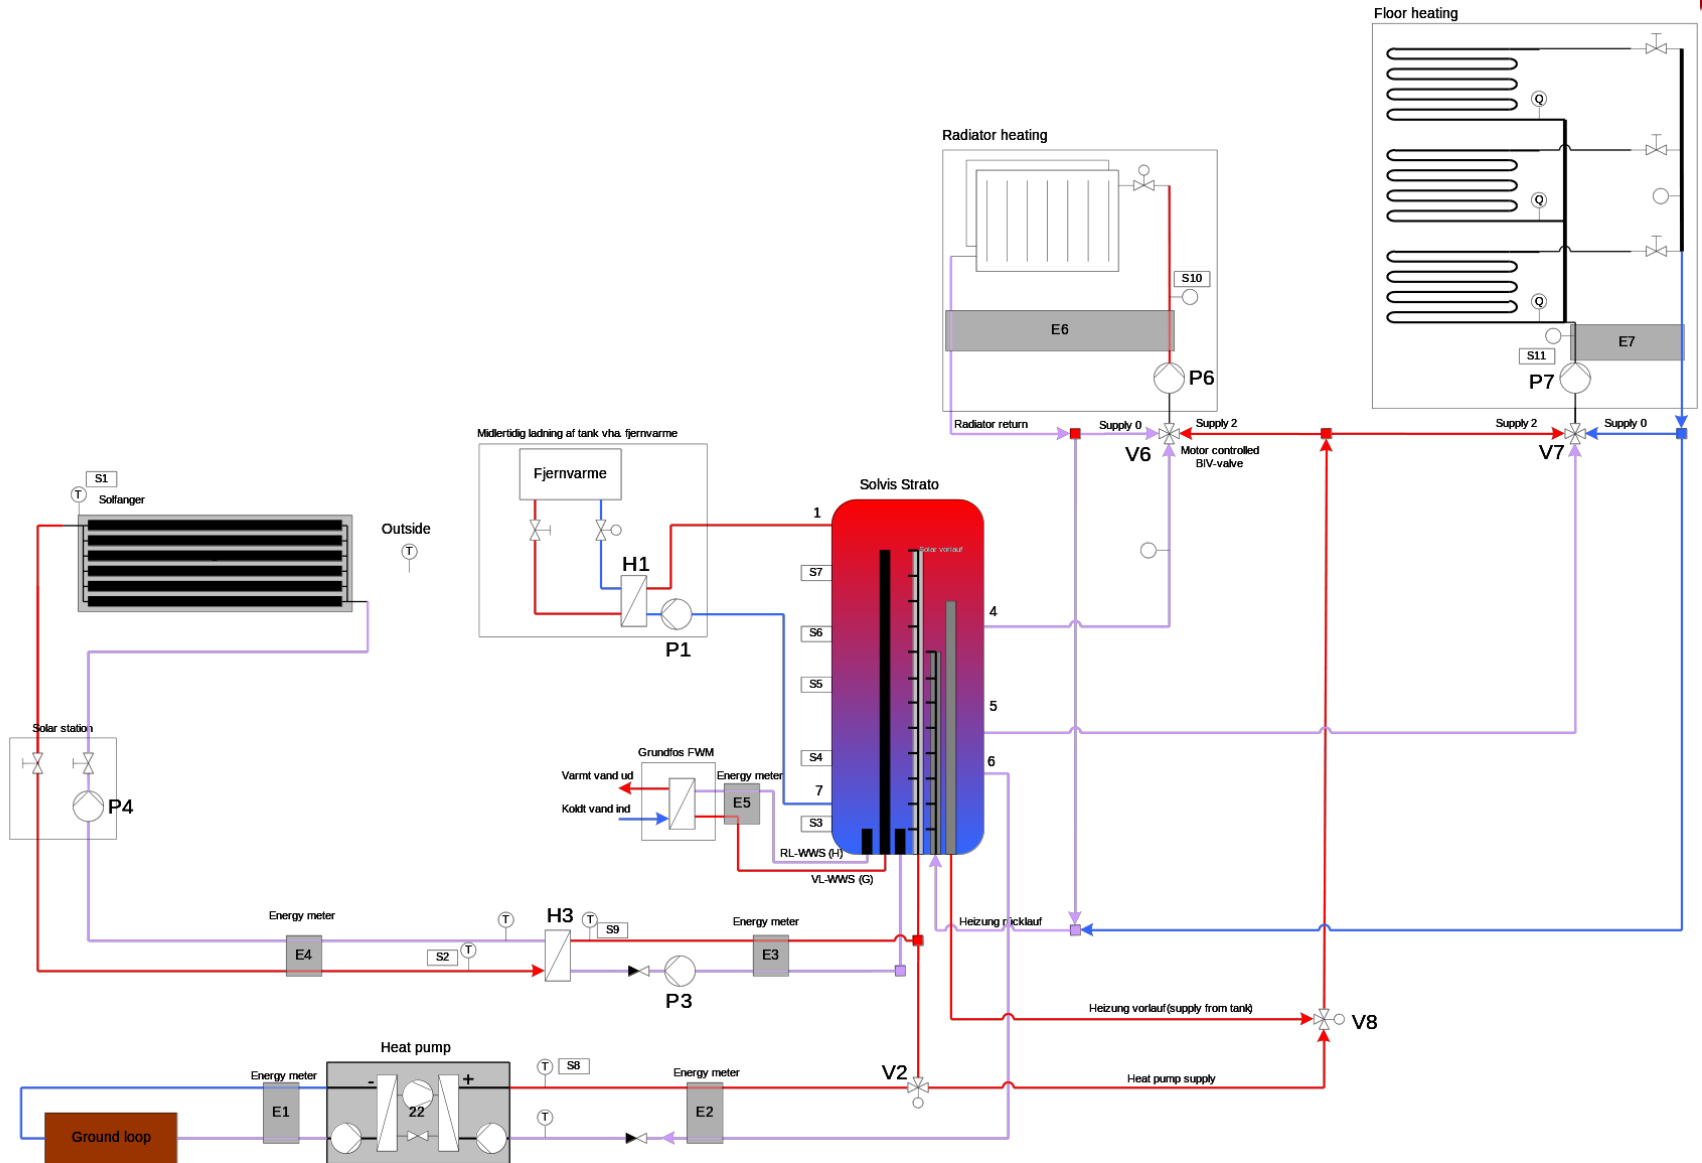

Test Facility

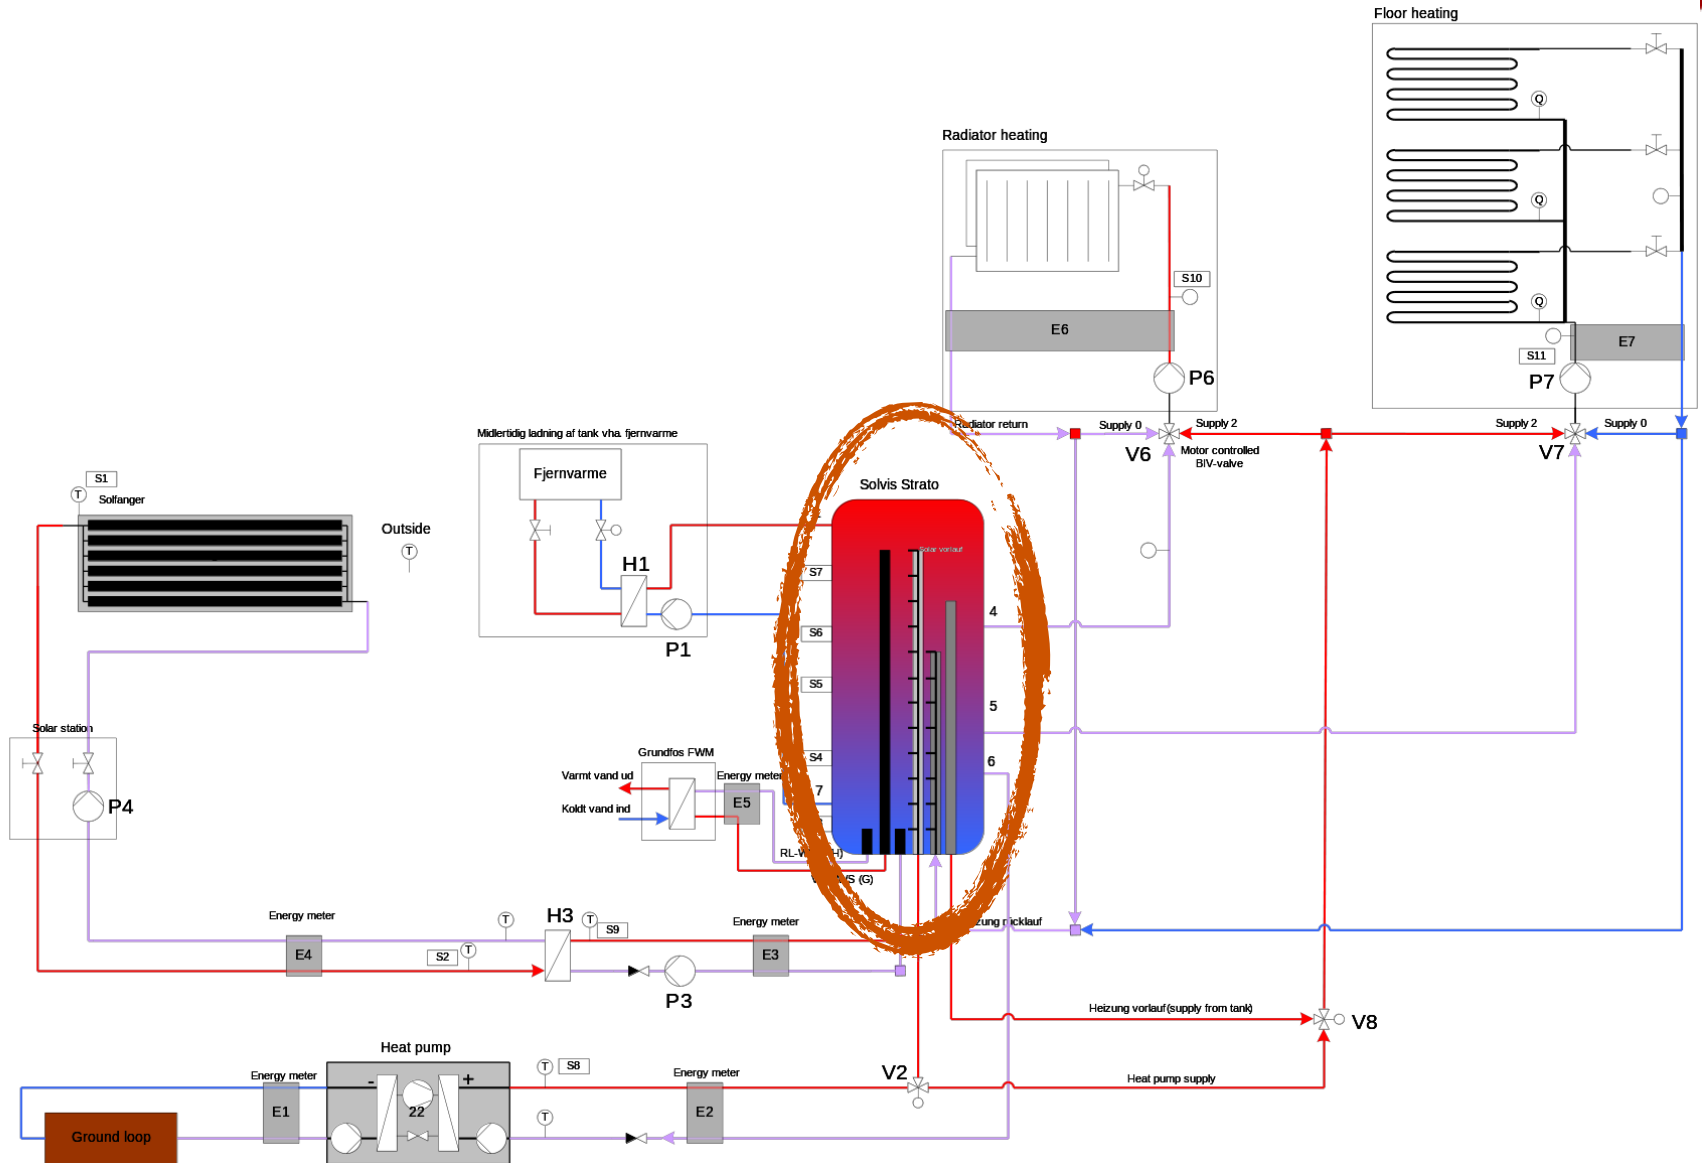

Test Facility

Heating System

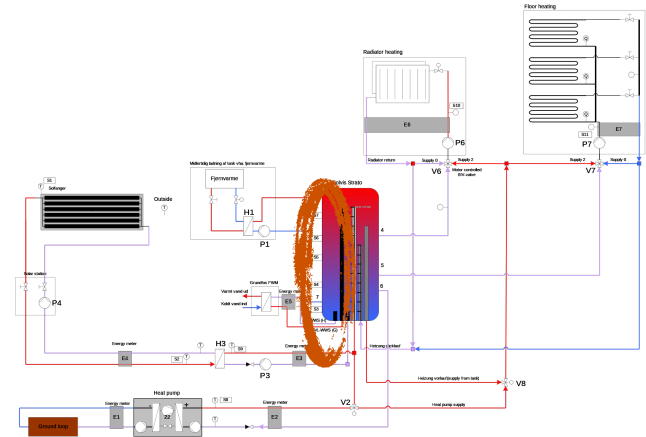

Hot Water Tank

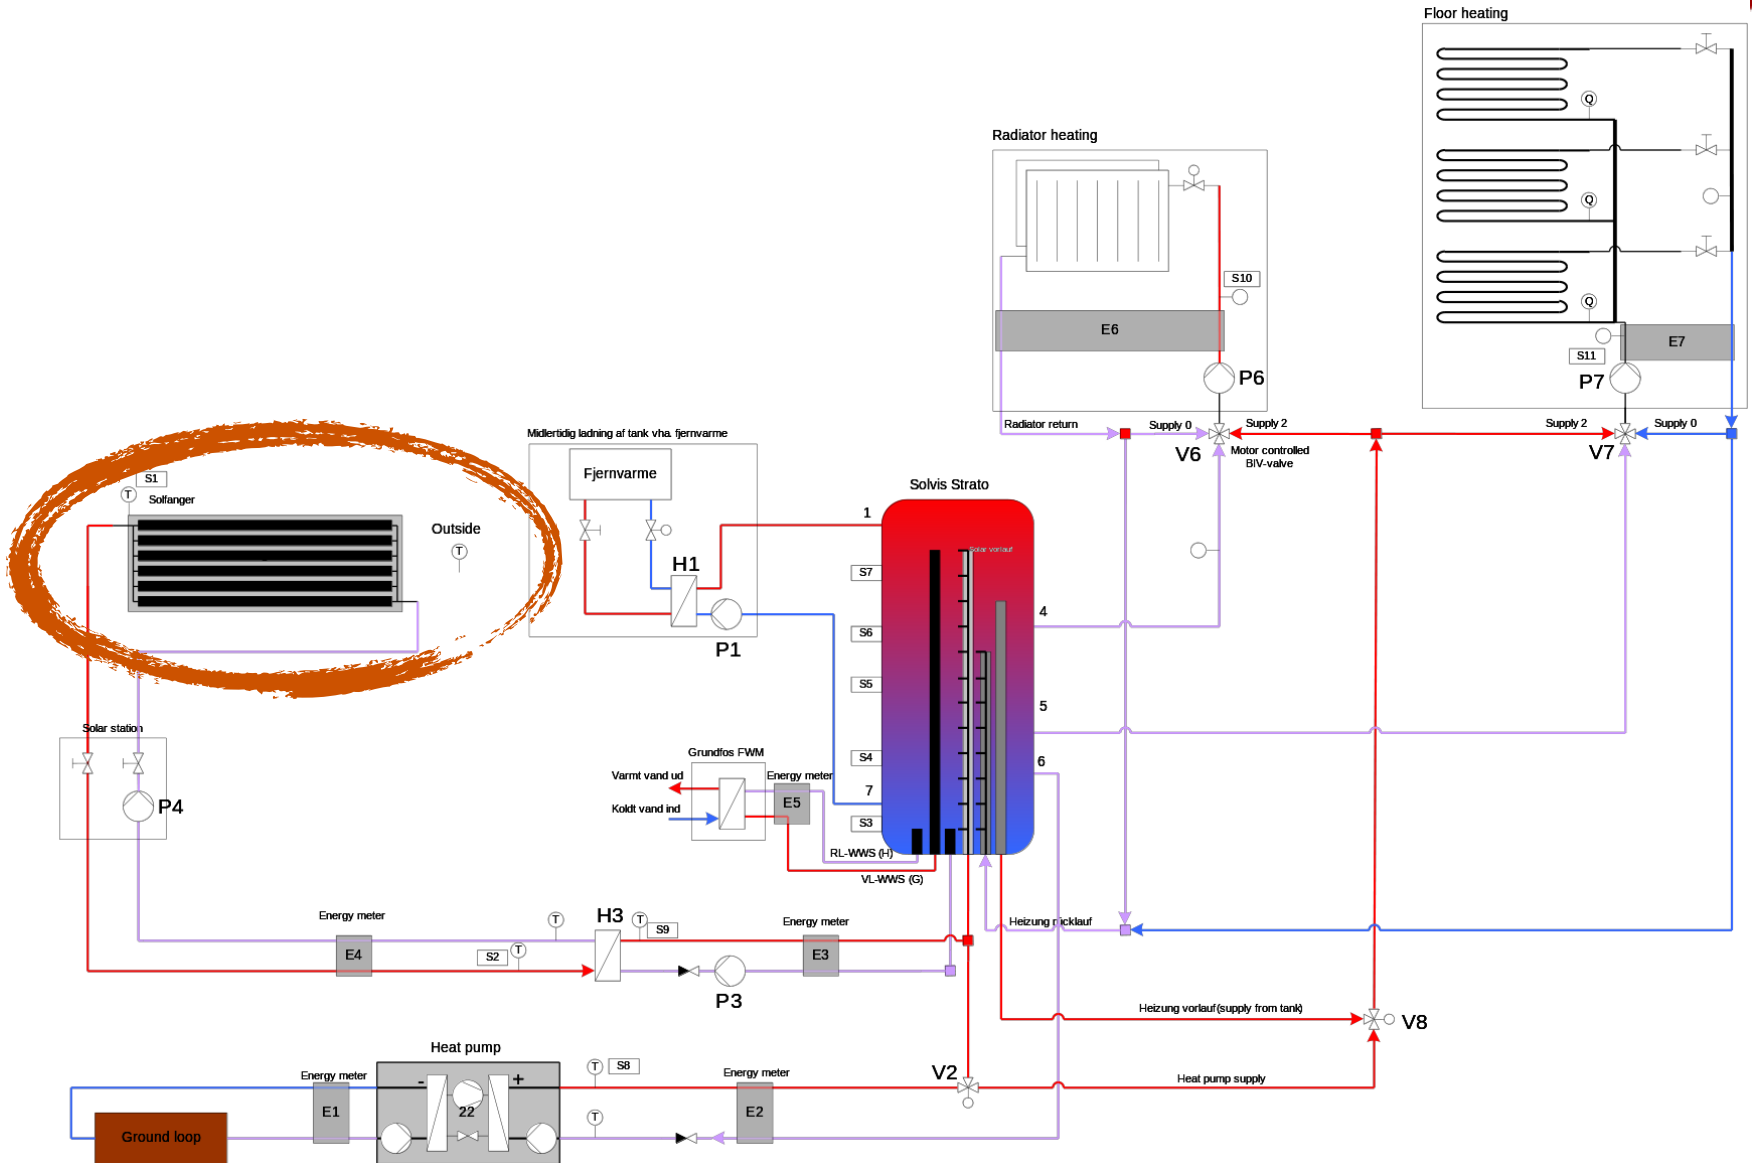

Hot Water Tank - Sensors

- 8 Temperature Sensors are placed equidistantly from each other on the hot water tank

Solar Thermal Collector

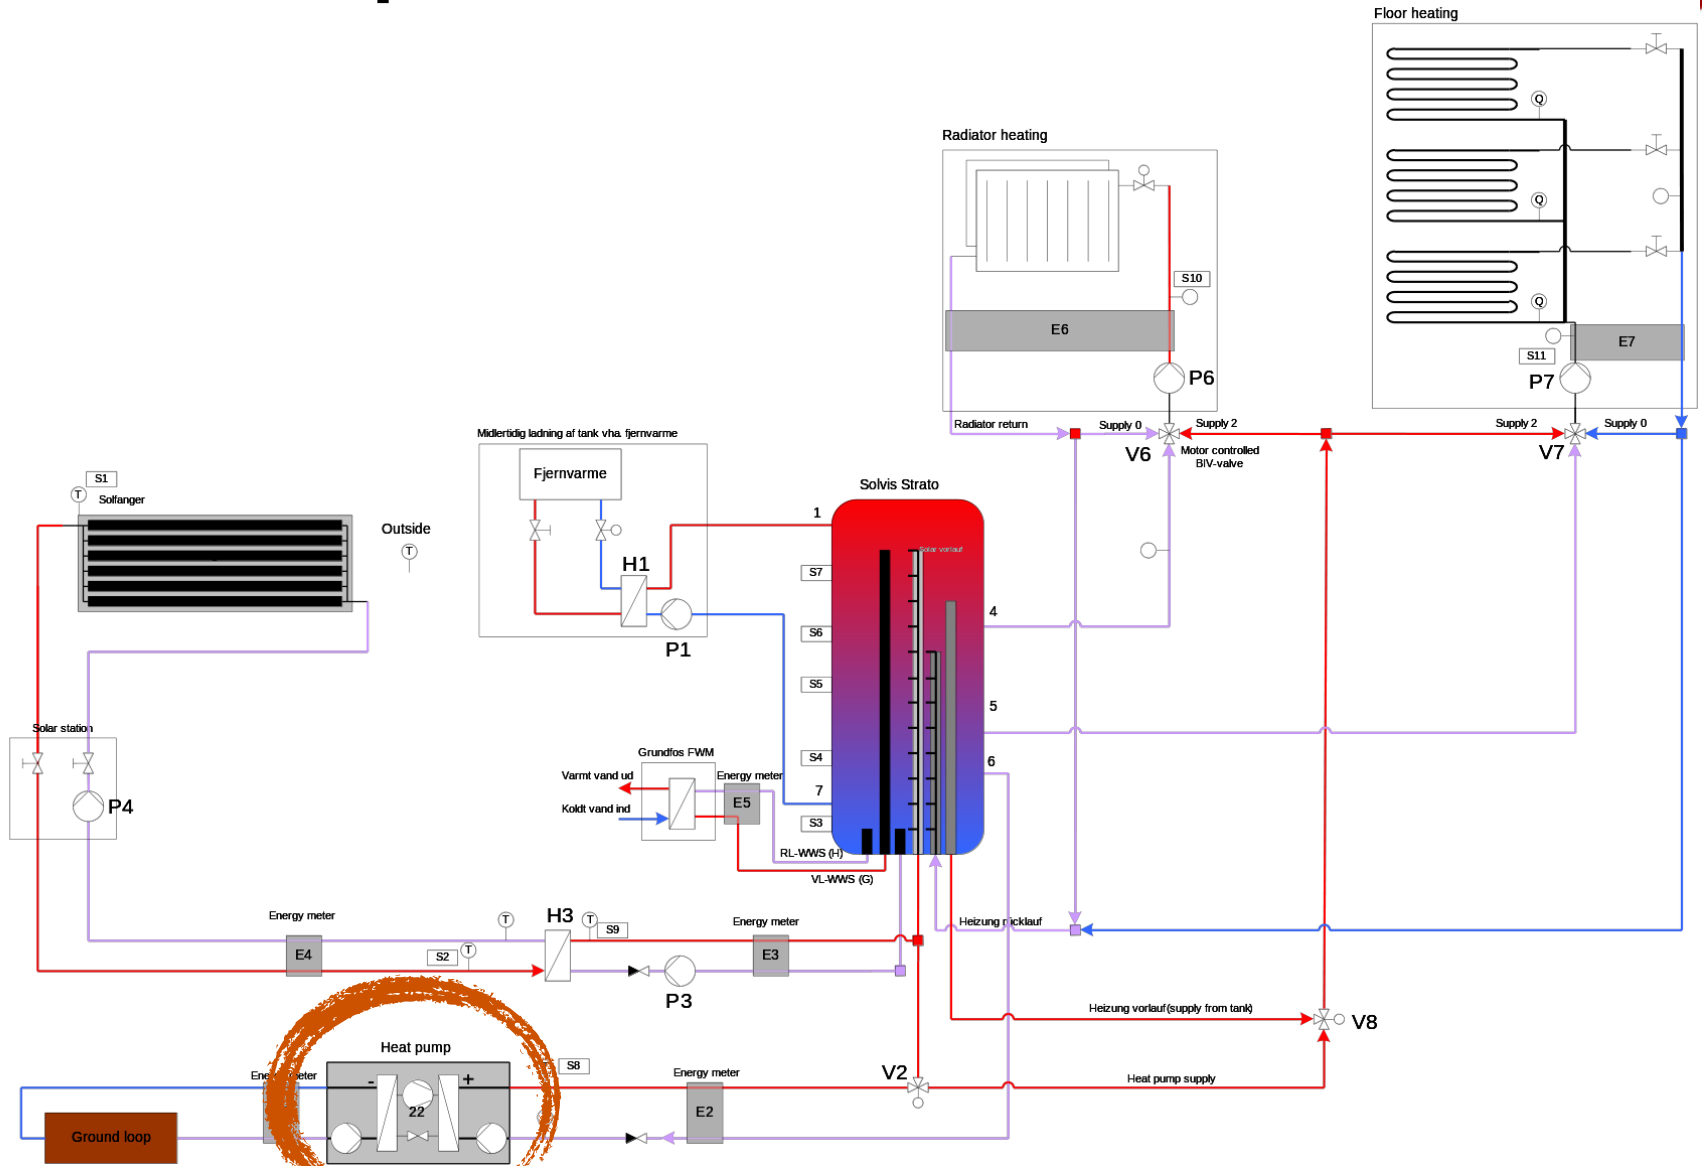

Solar Thermal Collector

- Wall mounted. 7.2 m²
- Approx. 90% effectiveness compared to the optimal tilt

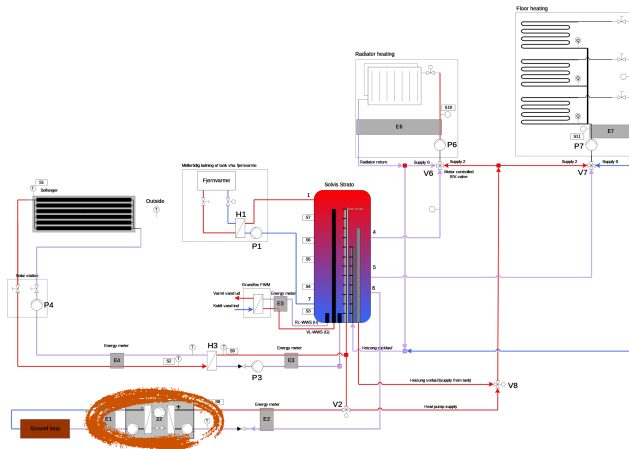

Heat Pump

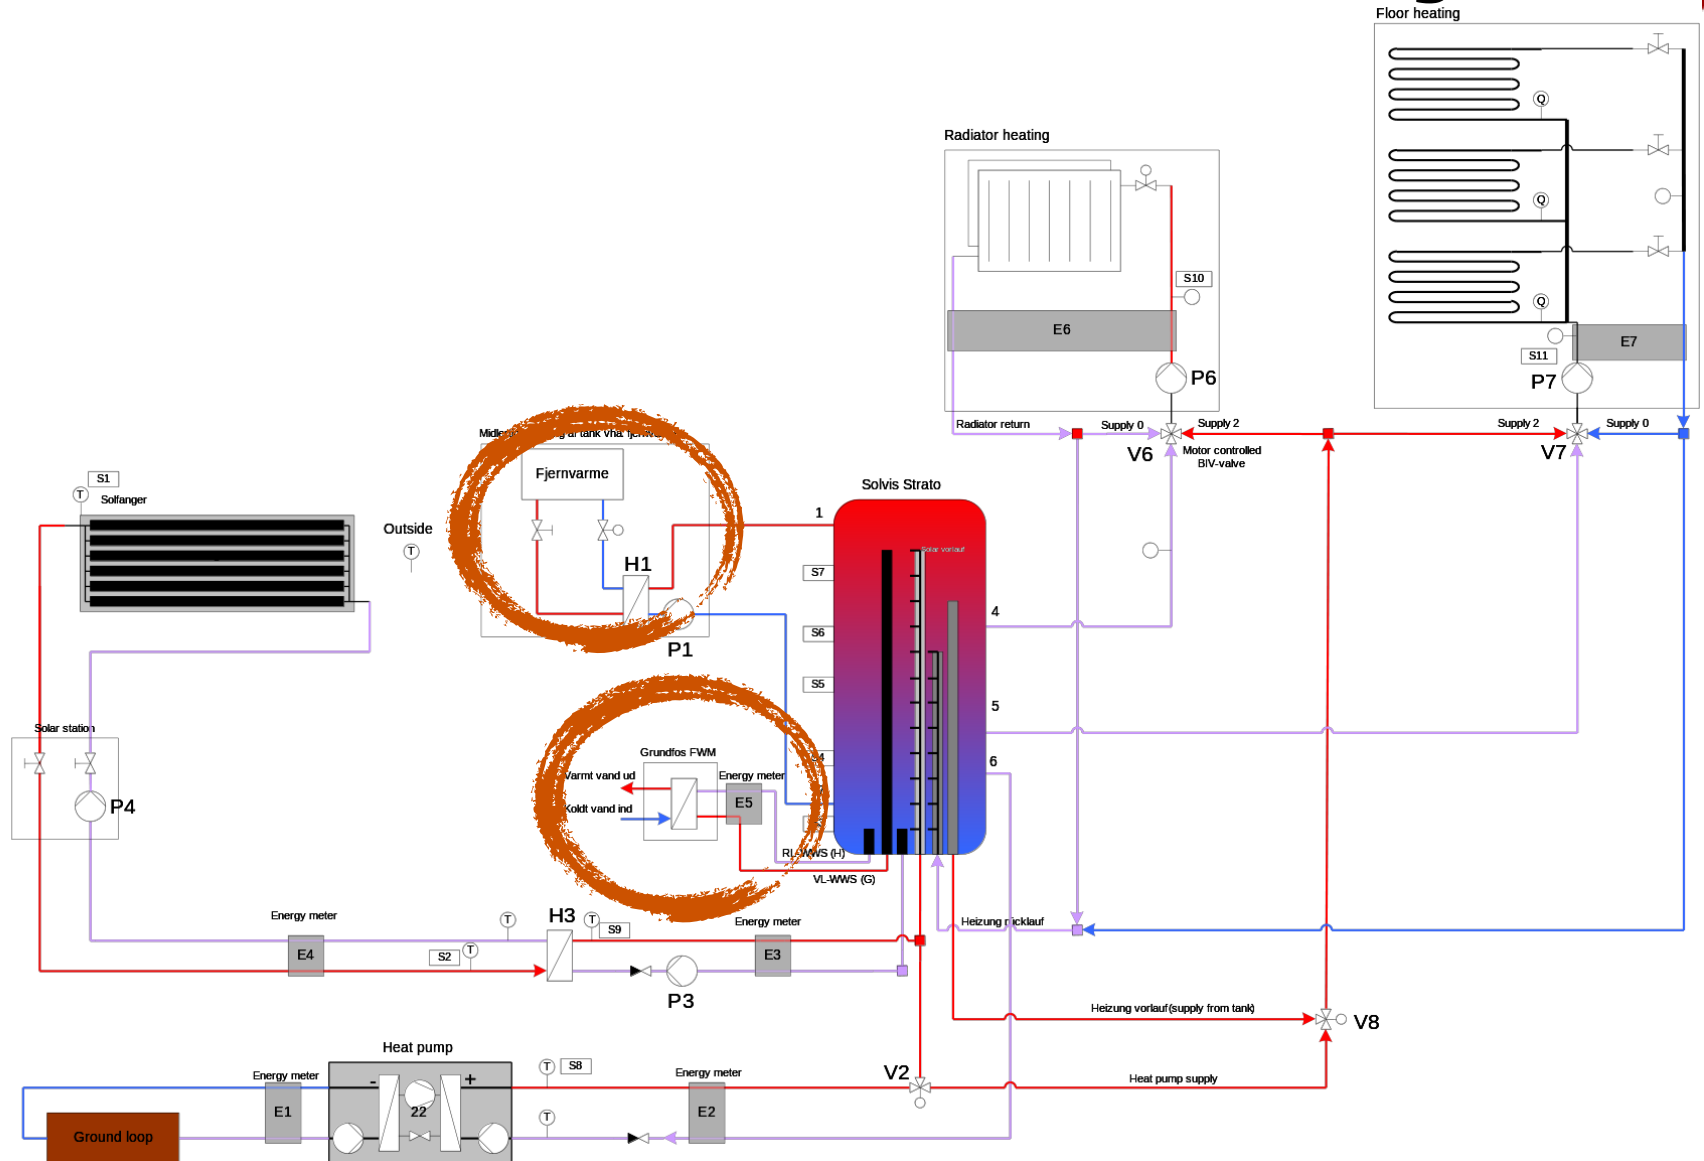

Heat Pump

- Delivers from 1.5 to 7 kW
- Variable speed compressor
- Grundfos pumps
- 300m ground pipe

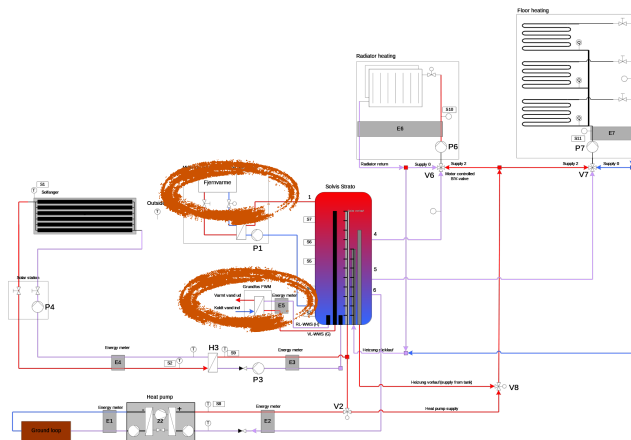

Domestic hot water and district heating

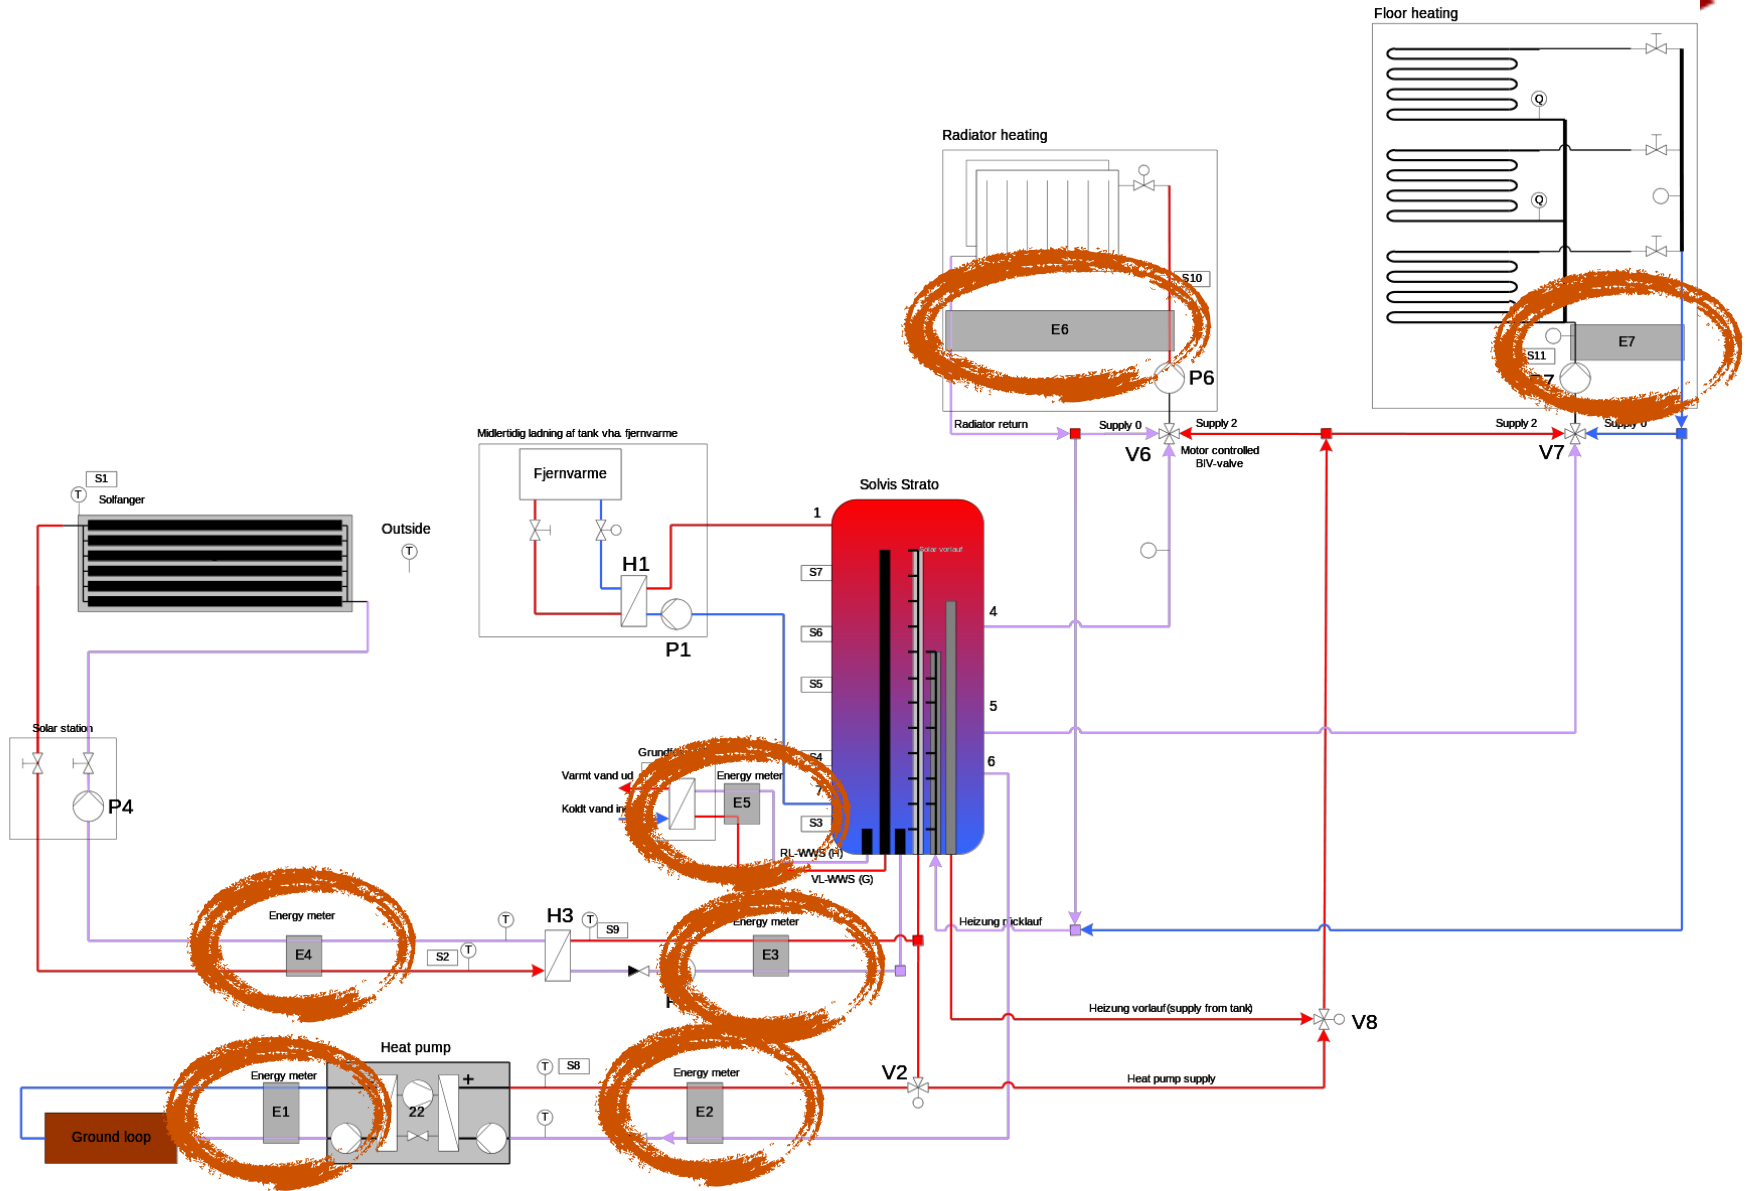

Domestic hot water and district heating

- Sonnenkraft / Grundfos Fresh water module
- District heating connected as backup

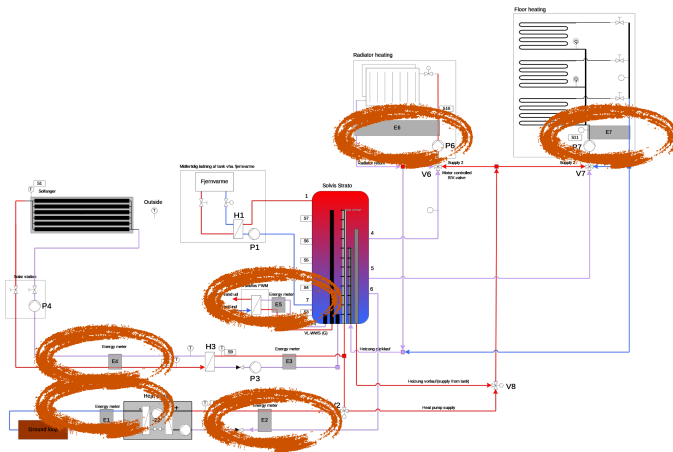

Sensors

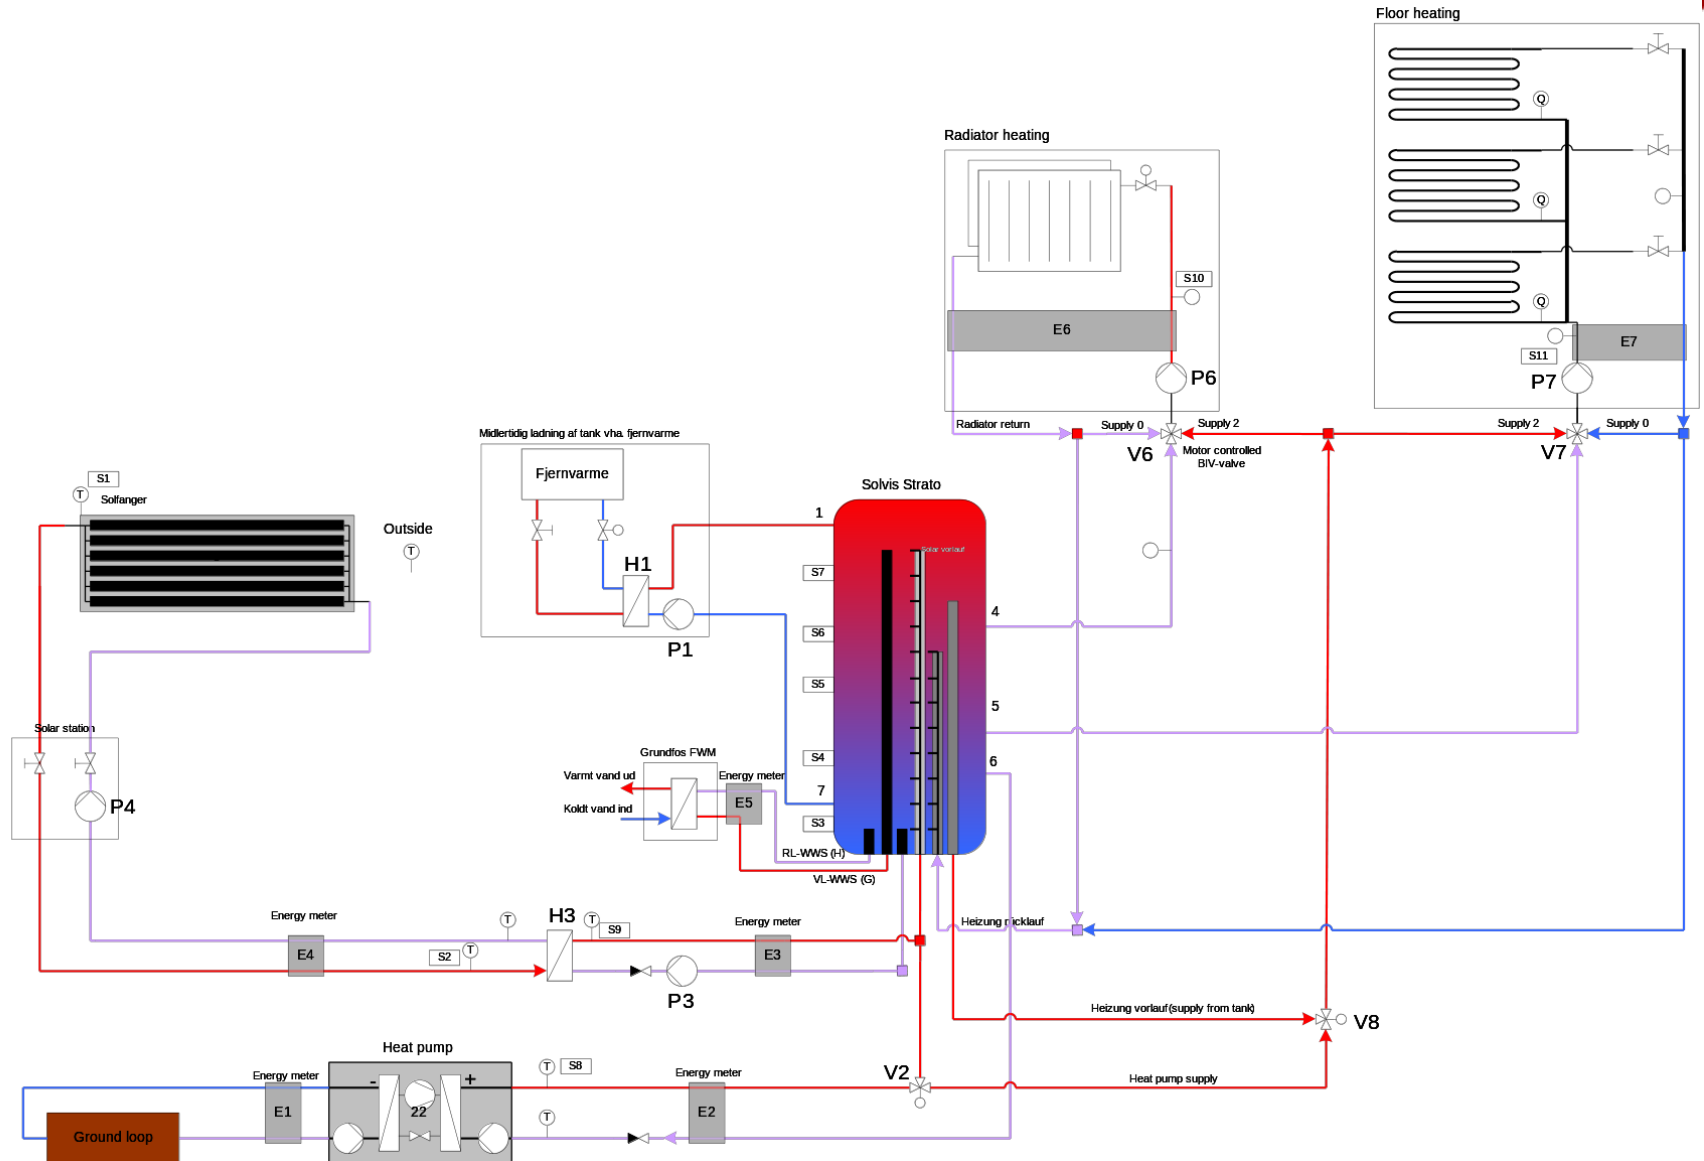

Sensors

- Weather Station
 - Davis Vantage Pro2 Plus
- Heat Meters
 - Kamstrup Multical in water circuits
 - Sontex Multical in brine circuits
- Wireless temp. sensors
 - Room and floor Temps

Conclusions

- » Controllability
- » Forecast integration
- » Adaptivity
- » Adv./Dis. Installation
- » User Comfort

» **Future Plans**

- » Flexibility potentials
- » Energy Savings
- » Different Models
- » Different Configuration
 - » Heat pump -> House

Thank you for your attention
