

WP₃-Intelligent Energy System Integration

Input	<ul style="list-style-type: none">• Building data (BBR, ois.dk)• Heat consumption data (District Heating suppliers)• Electricity consumption data• Weather data• Energy infrastructure in the examined area
Output	<ul style="list-style-type: none">• Building energy models (simplified & dynamic)• Building typologies for cities• Aggregation methodology of their energy demands• Flexibility potential of building types
Additional information required	<ul style="list-style-type: none">• Statistical models• Data management tools
