

# Smart Liveable Cities

Per Sieverts Nielsen

Presented at:

Sam Ratulangi University Manado

22 March, 2018, Indonesia

# Thanks to

- Angreine Kewo, LPDP (PhD student at DTU with LPDP scholarship)
- Centre to IT Intelligent Energy System, CITIES, which pays the cost me being here
- InnovationsFond Denmark (main funder of CITIES)

# Table of content

- What will you be doing?
- Technical University of Denmark (DTU)
- Mega trends
- Definition of a smart city
- Danish power system, power consumption patterns, challenges
- Centre for IT Intelligent Energy Systems (CITIES)
- CITIES – data platform
- The Danish Power hub
- European legislation on protection of person data
- IoT solution on air pollution monitoring
- Summary

# What will you be doing?

Work in the IT department of a company?

Work in a software company?

Will you work in a company developing IoT solutions?

Work on Blockchain solutions? Robotics?

Data security? --- Hacker!!!???

Develop Selfdriving – autonomous vehicles? Machine learning

Develop Selfdriving – autonomous businesses? Machine learning

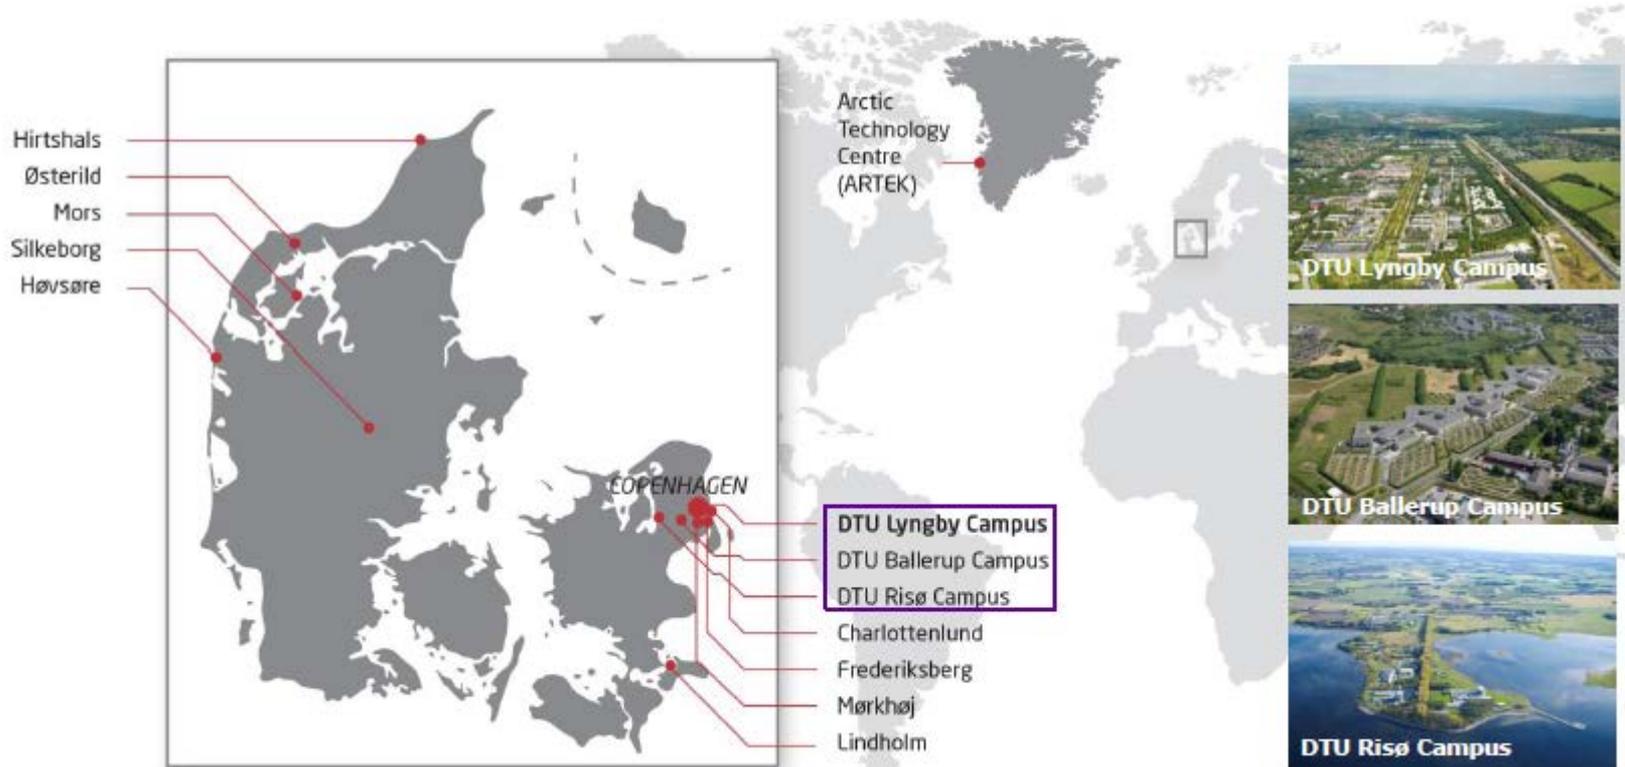

Work in the city/municipality/local government? Make smart cities?

Will you do a masters degree?

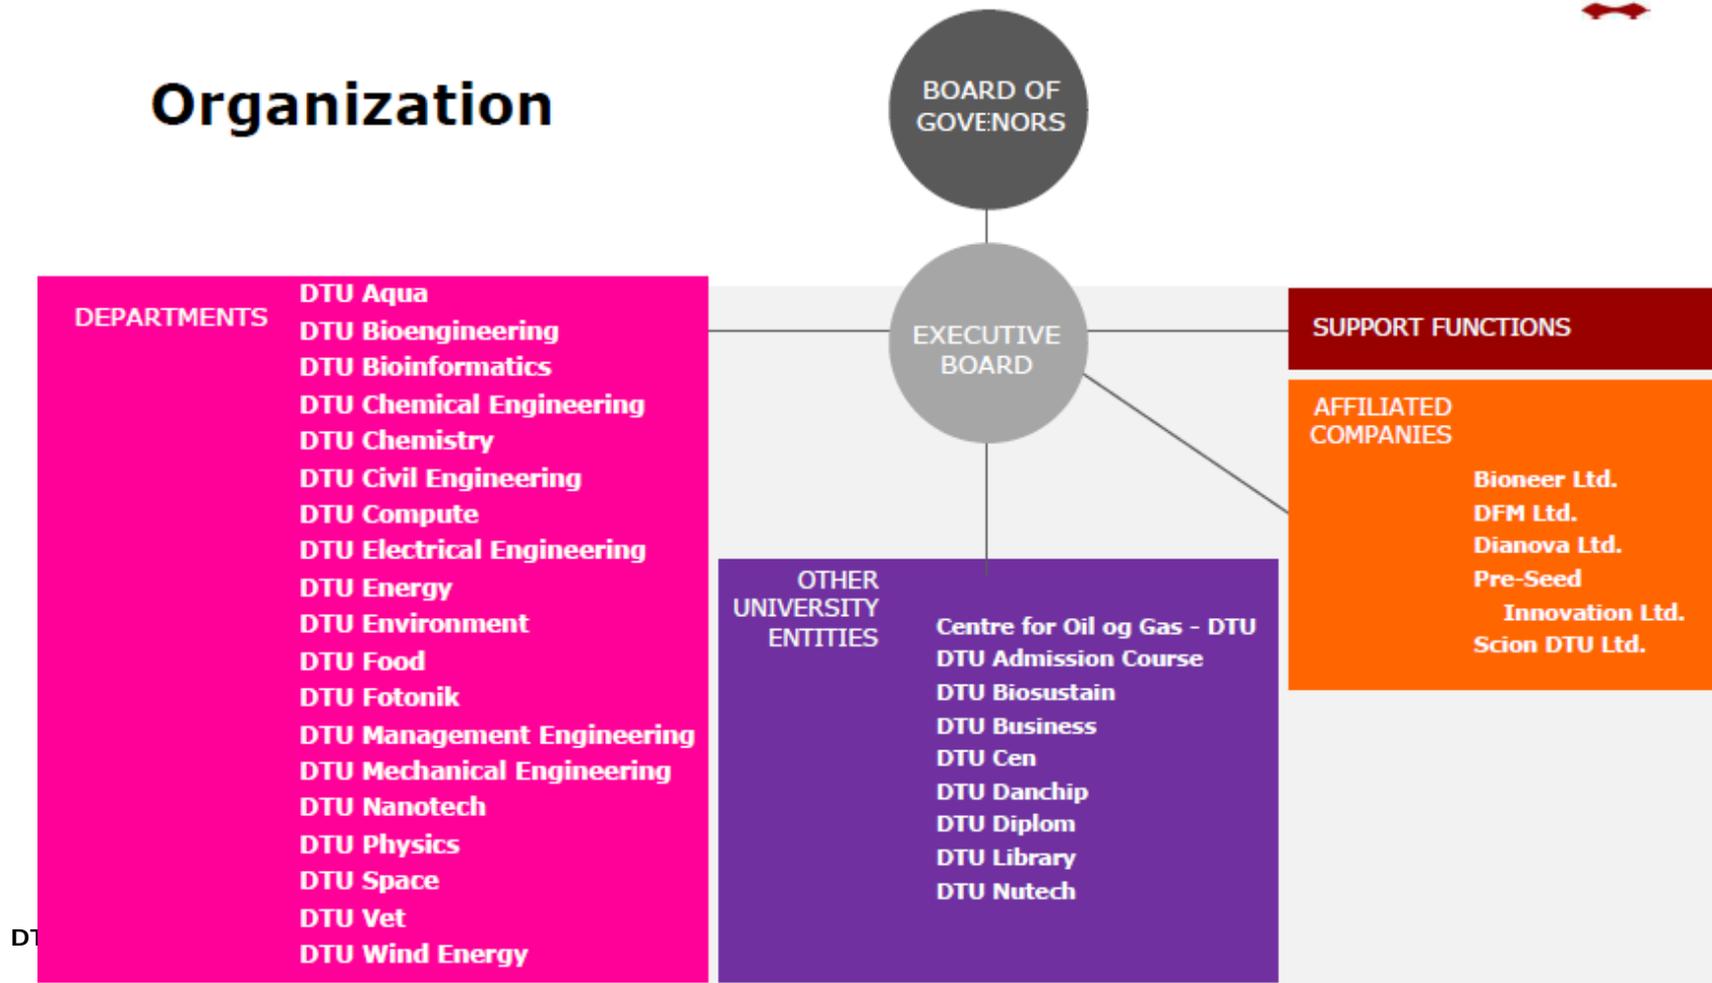

Will you stay in Manado?

# University locations across the kingdom

- centered in the capital region

# Organization

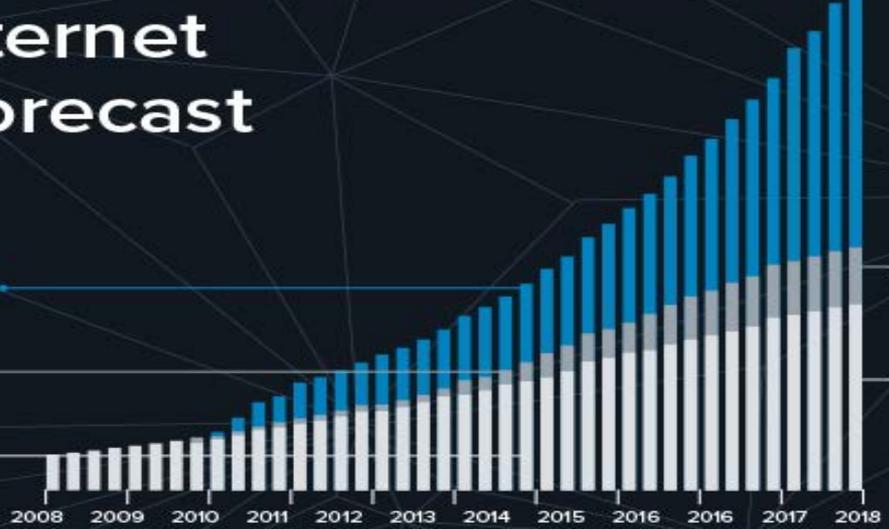

# \*\* Global Internet Device Forecast

**INTERNET OF THINGS**  
40 Billion Devices  
in Use by 2020

**INTERNET OF THINGS**  
8 Billion Devices  
in Use by 2014

**TABLETS**  
6 Billion Devices in Use  
by 2014

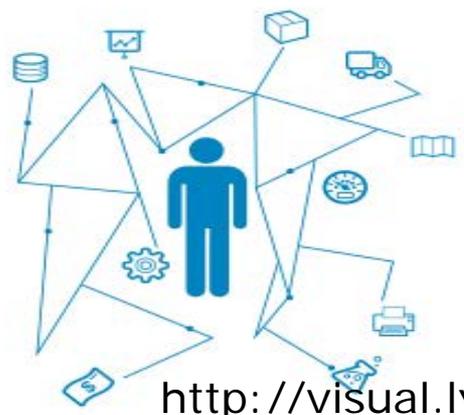

**SMARTPHONES**  
5 Billion Devices  
in Use by 2014

**TABLETS**  
9 Billion Devices  
in Use by 2018

**SMARTPHONES**  
8 Billion Devices  
in Use by 2018

† There will be as many as  
**40 TO 80**  
**BILLION**  
connected objects  
by 2020.

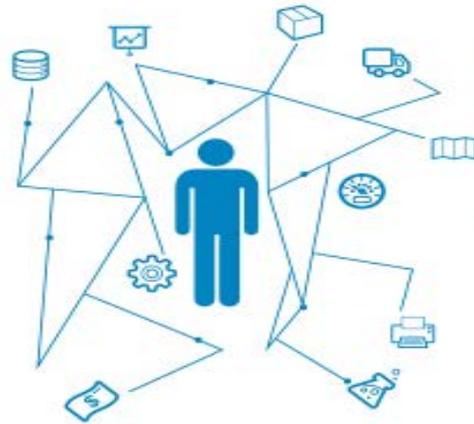

There will be  
**10** connected  
objects  
for every man,  
woman, and child  
on the **PLANET.**

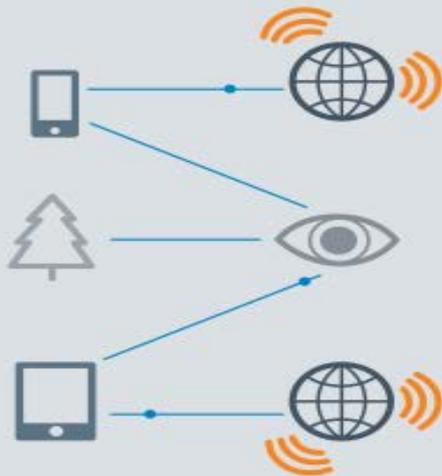

<http://visual.ly/future-internet-things>

† There will be as many as

**40 TO 80**  
**BILLION**  
connected objects  
by 2020.

There will be  
**10** connected  
objects  
for every man,  
woman, and child  
on the **PLANET.**

PEOPLE  
— ARE —

“THINGS”  
TOO!

Through the power of smart devices, people will not only consume data, but contribute observed data to the IoT through their phones and tablets as

**human sensors**

# Five global mega trends shaping the future

## Rapid urbanisation

## Demographic and social change

## Climate change and resource scarcity

## Shift in global economic power

## Technological breakthroughs

**35%  
more**

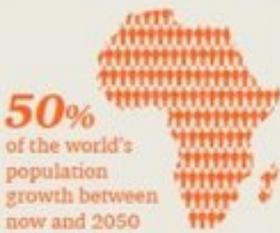

Expected increase in global food demand by 2030<sup>1</sup>

**2030**

We predict that seven of the world's biggest 12 economies in 2030 will come from emerging markets, the 'E7'<sup>2</sup>

Years taken for telephone to reach half of US households; the smartphone in under ten<sup>3</sup>

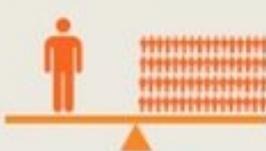

**50%**

of the world's population growth between now and 2050 is expected to come from Africa<sup>4</sup>

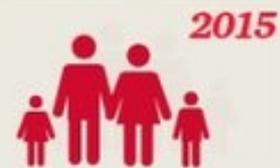

**1.5 million**

people are added to the global urban population every week<sup>5</sup>

The world's **85** richest people own as much wealth today as the poorest **3.5 billion**<sup>6</sup>

**2015**

In 2015 the size of the middle class in Asia Pacific is expected to overtake Europe and North America combined<sup>7</sup>

**50%**

of global GDP is generated by the 300 largest metropolitan areas<sup>8</sup>

Around half of US jobs are at risk of being computerised over the next two decades<sup>9</sup>

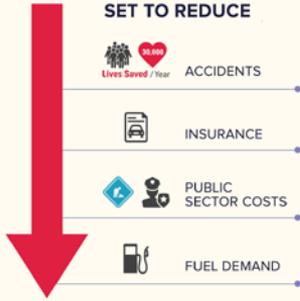

**AN AUTOMOTIVE  
REVOLUTION IS COMING**  
AND THE IMPACTS WILL BE HUGE.

## DRIVERLESS CARS

## FREE POWER

**FREE ELECTRIC POWER**  
SET TO SHAKE UP THE STATUS QUO

### SET TO REDUCE

Industries will need to adapt or fade away:

# Definition of a smart city

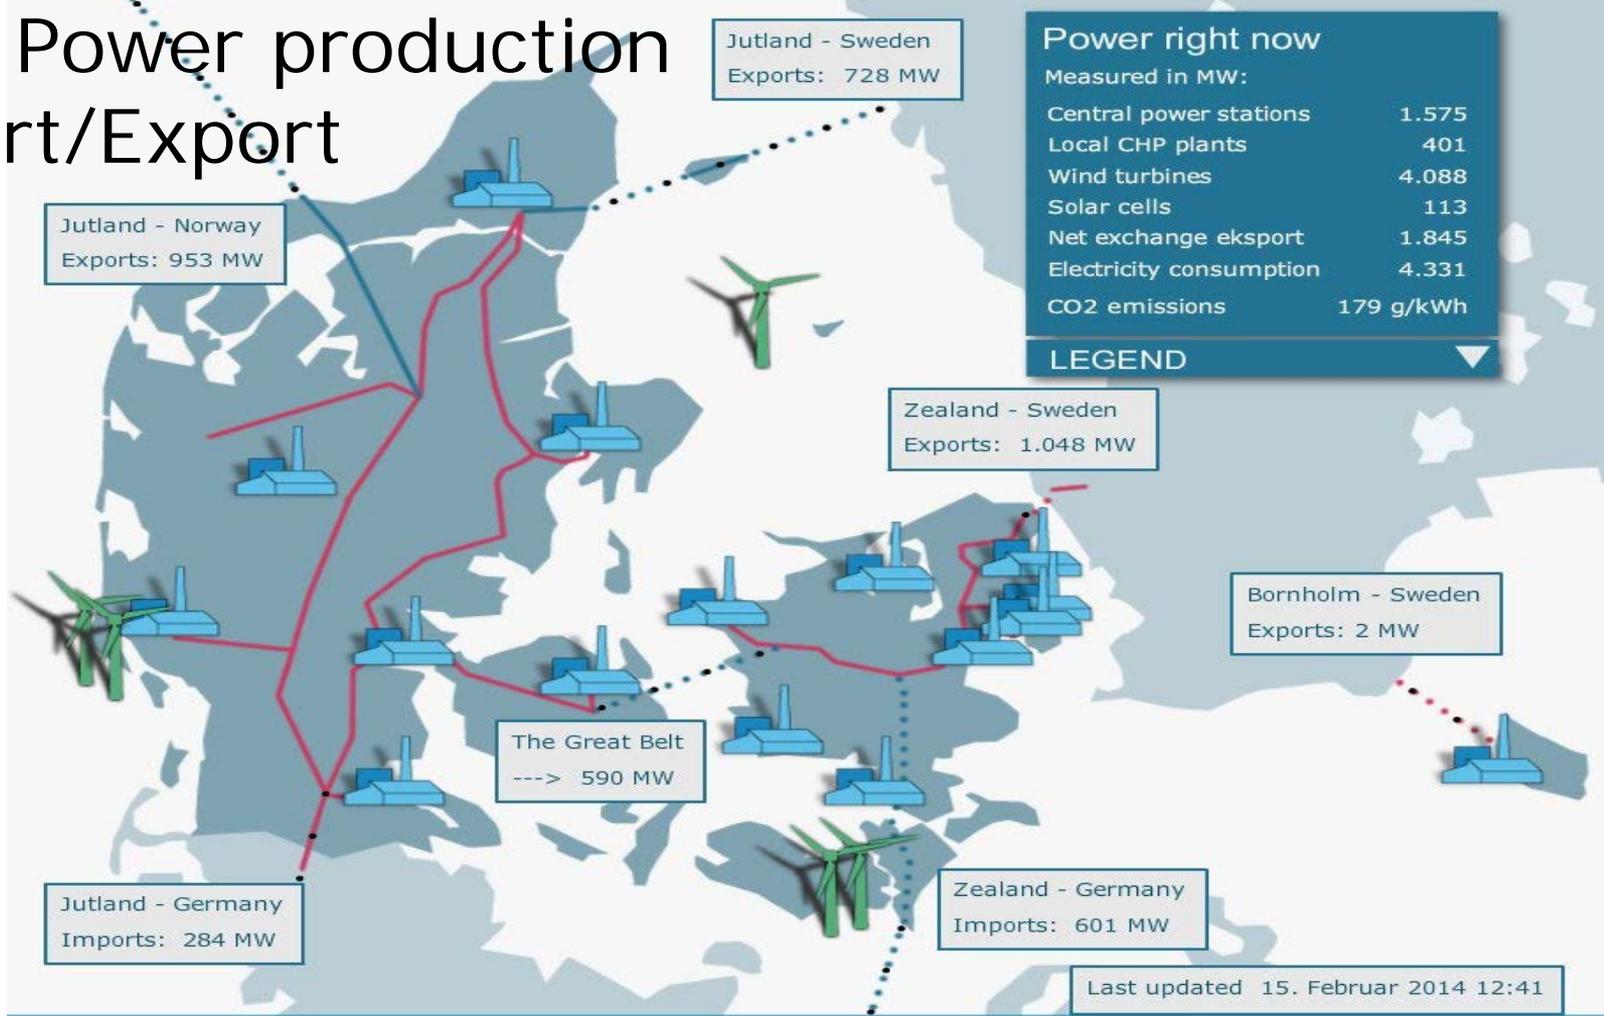

“The Smart Energy City is **highly energy** and **resource efficient**, and is increasingly powered by **renewable energy sources**; it relies on integrated and resilient resource systems, as well as insight-driven and innovative approaches to strategic planning. The application of **information, and communication technology** are commonly a means to meet these objectives. The Smart Energy City, as a core to the concept of the Smart City, provides its users with a liveable, affordable, climate-friendly and engaging environment that supports the needs and interests of its users and is based on a sustainable economy.”

# What does it mean that we try to connect all aspects of Smart City?

# Danish Power production

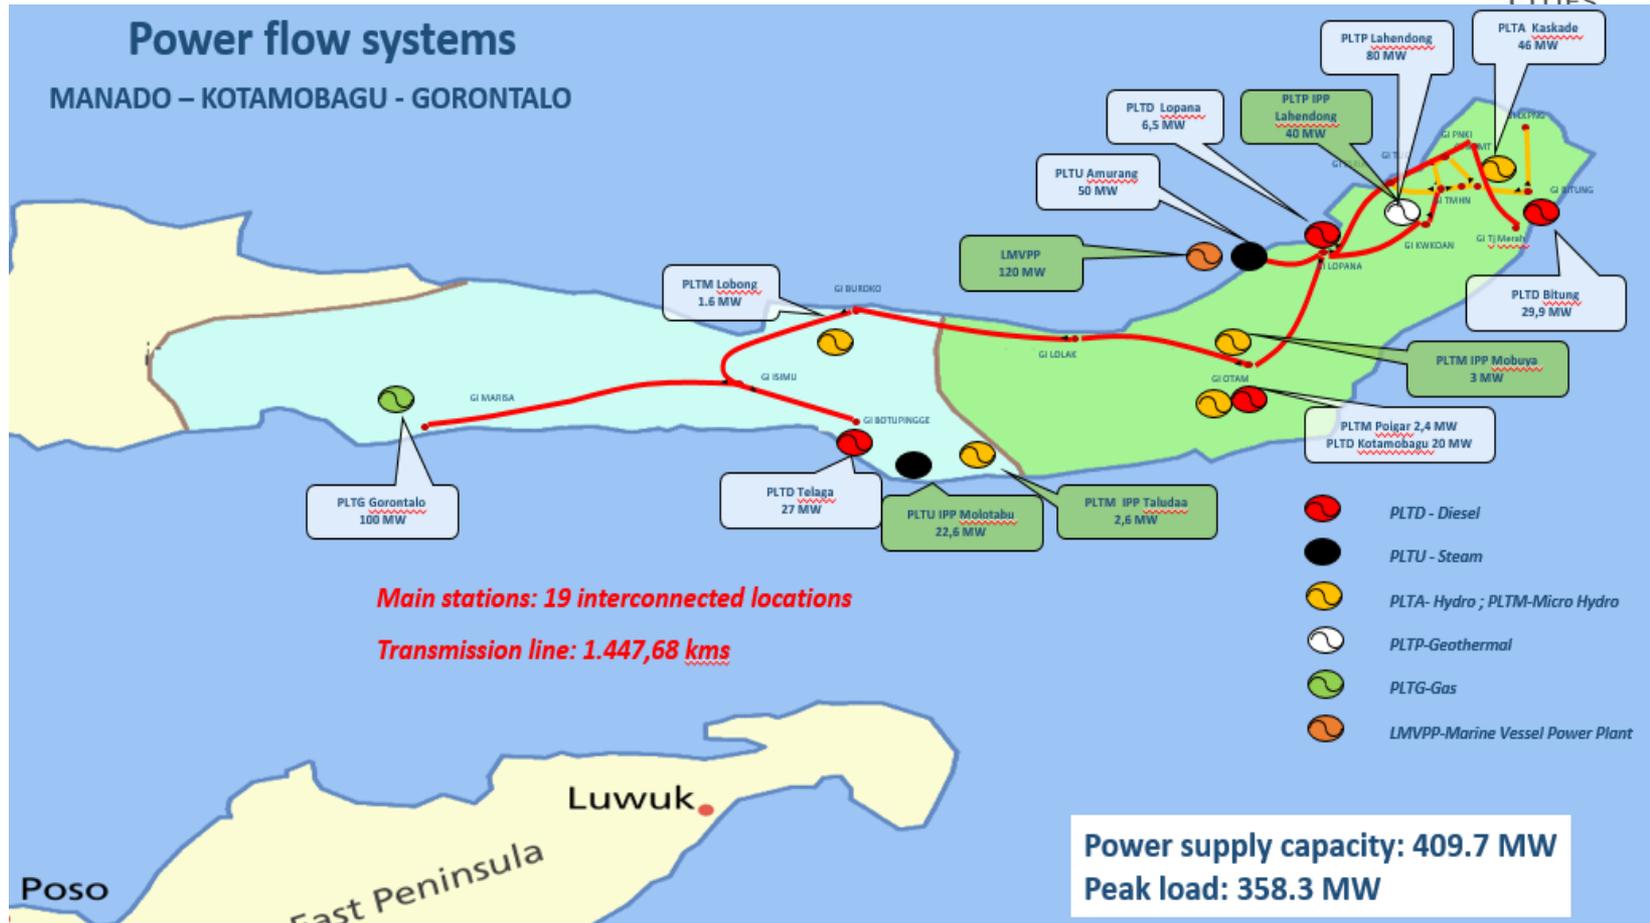

## - Import/Export

# Power flow systems in Manado

nd Denmark

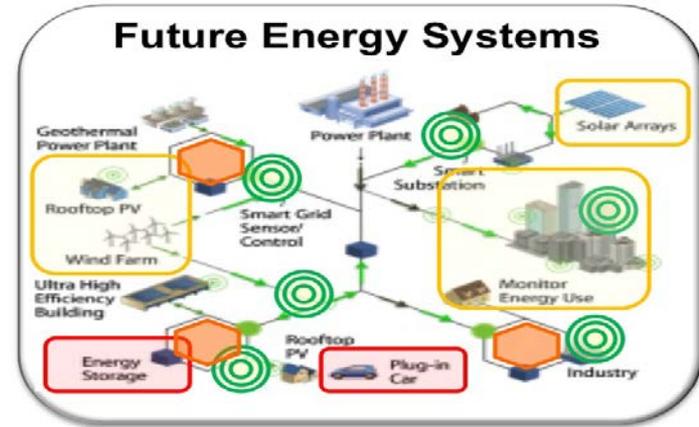

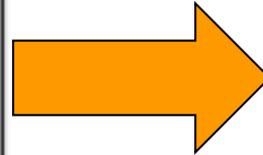

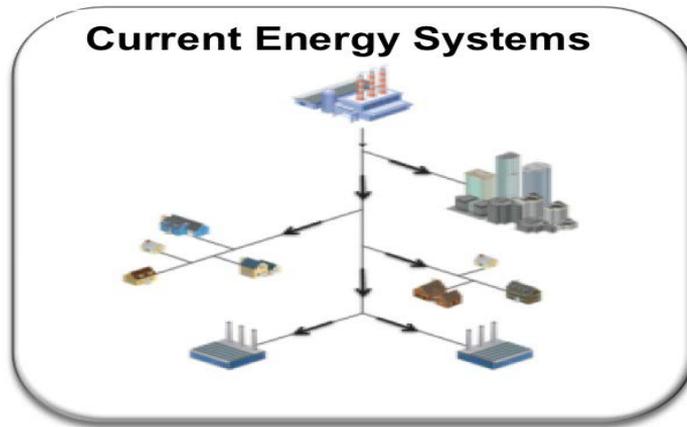

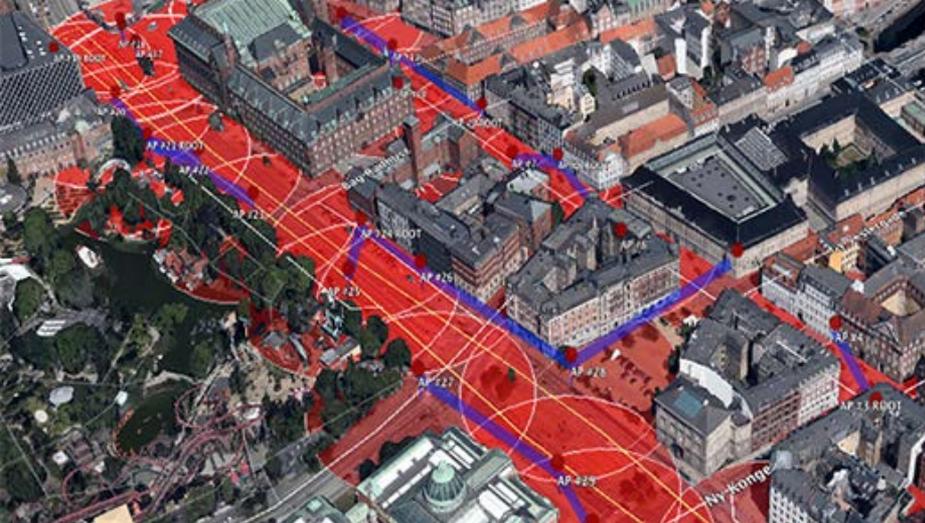

# Electricity production (green) and electricity consumption (grey) over **three weeks** in Denmark

# Change towards smart networks or decentral solutions

- From centralised to decentralised production

# Translation

# Centre for IT Intelligent Energy Systems - CITIES

## Scientific Objective

To establish **methodologies and ICT solutions for design and operation** of integrated electrical, thermal, fuel pathways at all scales.

# Key Outcomes

- Modular **forecasting and control models/tools** for a variety of energy system components, including their interactions
- **Market structures** that support energy systems integration
- Operational **methods and scenarios** for energy systems integration and management, scenarios towards a fossil free future (Power and heating sectors fossil fuel free in year 2035)
- **2014-2019, 10 €Mio (Innovationfond Denmark 6 €Mio, 38 partners)**
- **18 Demo Projects finished, ongoing and planned.**
- **80 published papers**
- **Setting up an Innovation Centre**
- **[www.smart-cities-centre.org](http://www.smart-cities-centre.org)**

# Results: some examples

## Software:

- HPMPC: A toolbox for High-Performance MPC
- MPC-R: A toolbox for MPC in R
- CTSM-R: A toolbox for semi-physical modelling in R Modelling and

## Planning tools

- Modelling tools for aggregated loads
- Multiple Execution Tool (MultiNODE) for EnergyPLAN
- Sifre (Energinet.dk) - incl. tests in Sønderborg

## Hardware

- SN-10 Smart House Controller
- MPC setup – LabView – OPC-UA client (next PASSYS test cell)

## Data Analytics and Energy Informatics

- WEB-service for forecasting and control (load, wind, solar,...)
- Cloud based model predictive control
- Smart-Energy Data Management Systems (OS, DATA, REP)

# Demo projects

- Building Energy Demand Modelling
- Control of heat pumps
- Dynamic CO<sub>2</sub>-based control of summerhouse swimming pool heating
- Dynamic prices for heat delivered to district heating systems
- Energy Supply Modelling in cities: A Case Study of Sønderborg Municipality
- Heating of indoor residential swimming pools by solar collectors in Denmark
- Load forecasting for District Heating
- Optimal Control of District Heating Supply Temperatures to Greenhouses
- Smart Meter Data Analytics
- Thermal mass for energy storage: Impacts and perspectives on a system scale
- Optimization under uncertainty of heat and power production in district heating systems
- Regulating Power Market; Modelling and Forecasting
- Data Intelligent Temperature Optimization of DH networks

## Software solutions

### Software for combined physical and statistical modelling

Continuous Time Stochastic Modelling (CTSM) is a software package for modelling and simulation of combined physical and statistical models. You find a technical description and the software at [CTSM.info](http://CTSM.info).

### Software for Model Predictive Control

# Upcoming European protection of personal data

Regulate the use and protection of personal data.

Major changes:

- Elaborates the right of the registered
- Right to be forgotten
- Data portability: Take ALL your data from one social media to another.
- Stricter documentation requirements: Must be able to document the effort in securing data
- Greater fines: % of global sales

Intended to harmonize

- But approximately 50 areas where each country can make own legislation
- Still going to be complicated

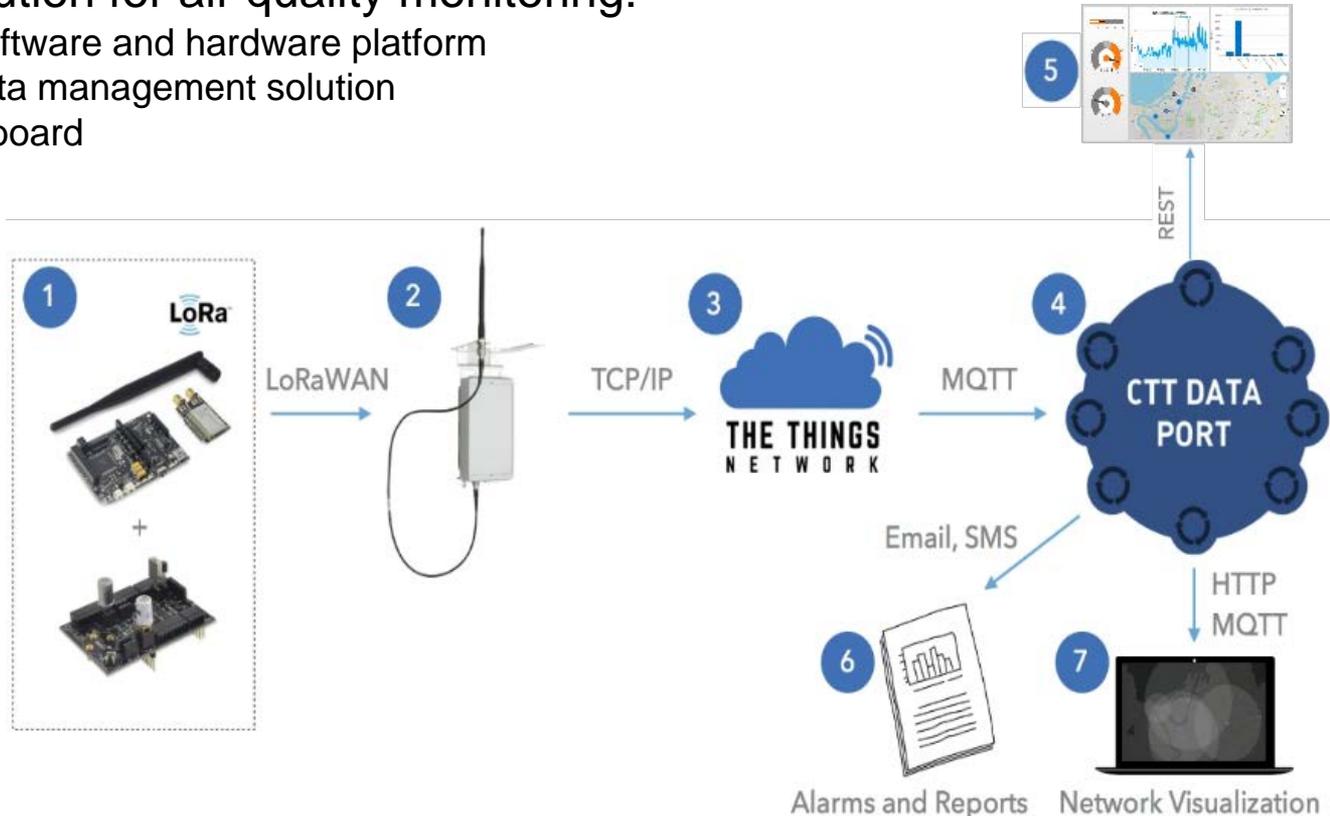

# IoT sensors for monitoring air quality

# CTT: An IoT-based carbon track and trace system

A holistic IoT solution for air quality monitoring:

- Open source software and hardware platform
- Scalable IoT data management solution
- Real-time dashboard

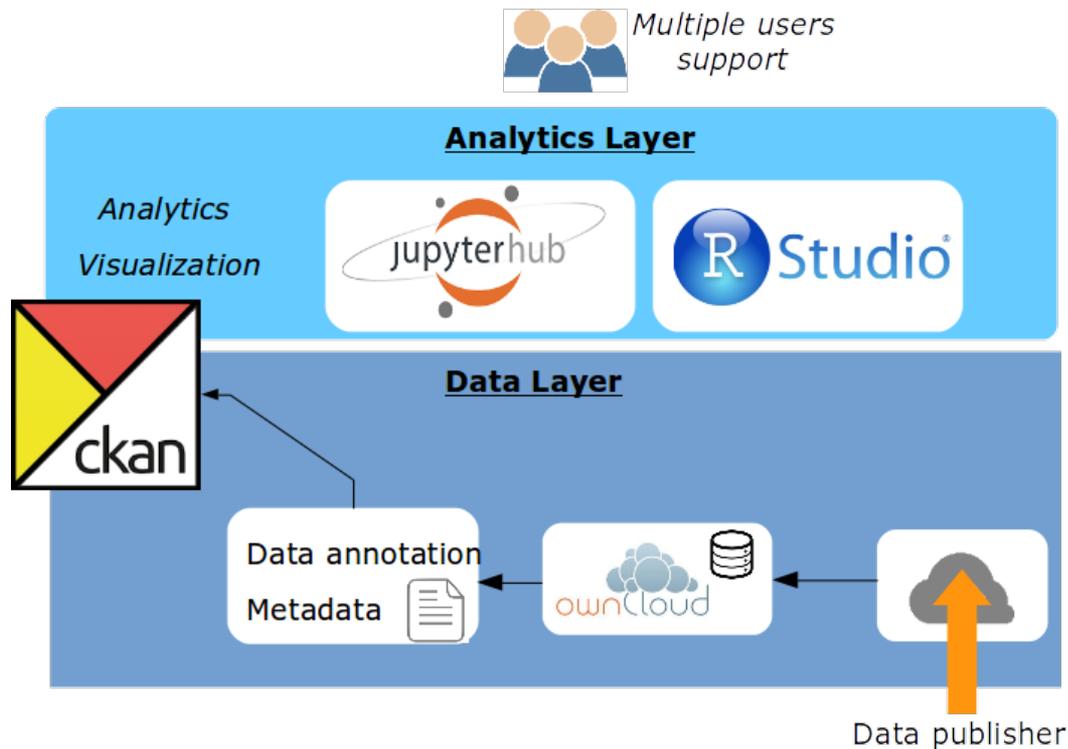

# SciCloud Service - *Cloud-based data and analytics service*

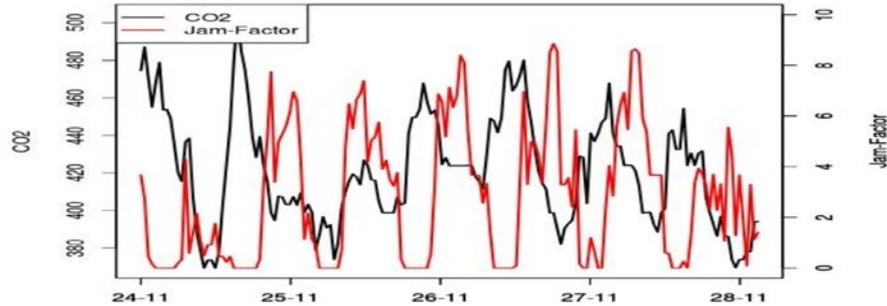

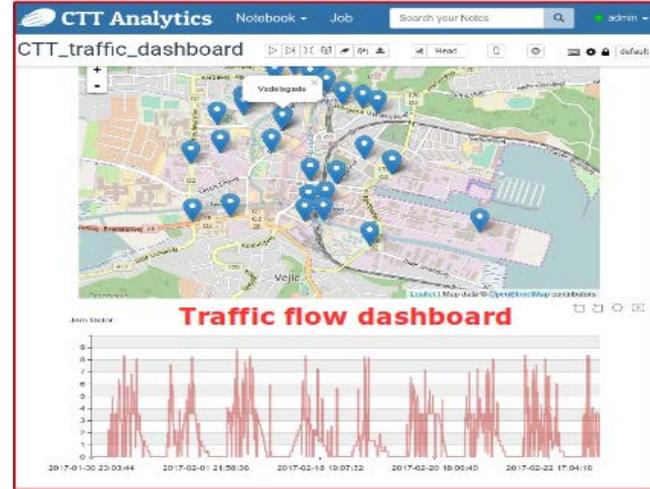

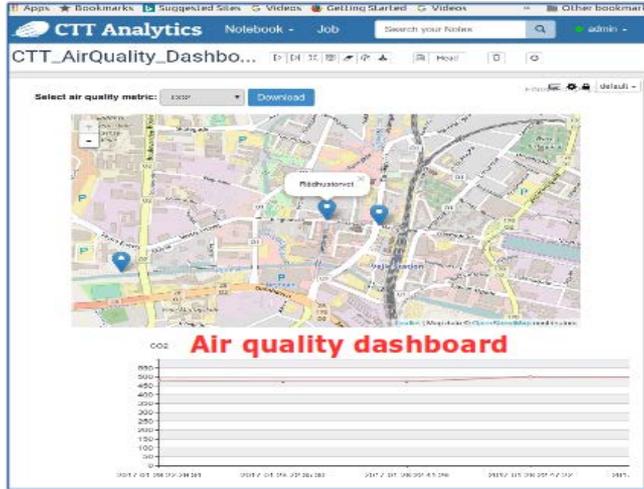

Cloud-based data management

Open data portal

In-place data analytics service

# Analytics and visualization

Model the correlation between traffic jam factor and CO2

# Smart city projects in Denmark

Copenhagen city: <https://cphsolutionslab.dk/en>

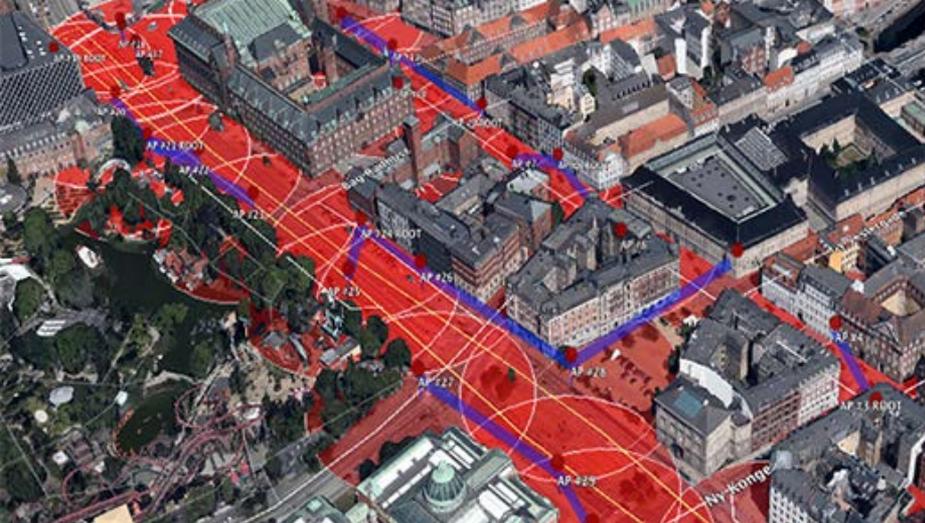

Aarhus: <http://www.smartaarhus.eu/>

# Summary

You are ahead of the rest of the society with ideas which potentially can improve quality of life for its citizens.

You should remember to keep the big picture in mind in your systems development and remember where you are “right now” in this process.

Smart cities need smart people and smart stakeholders to work together. It will not happen by itself.
